

CONSTRUCTION FORECAST

W. Lisbon Avenue from N. 100th St. to W. Burleigh St.

JULY/AUGUST 2026

CONSTRUCTION FORECAST THE WEEK OF JULY 27

The City of Milwaukee is reconstructing W. Lisbon Avenue between N. 100th Street and W. Burleigh Street. In 2026, crews are reconstructing the street between N. 86th and W. Burleigh streets. The following work is scheduled to take place.

Between N. 86th and W. Burleigh streets:

Crews are scheduled to begin permeable paver installation in the westbound parking lane.

- Permeable paver locations will be excavated, then lined with sand and gravel to create a firm and porous base. Pavers are installed on top of the base, flush with the new concrete.

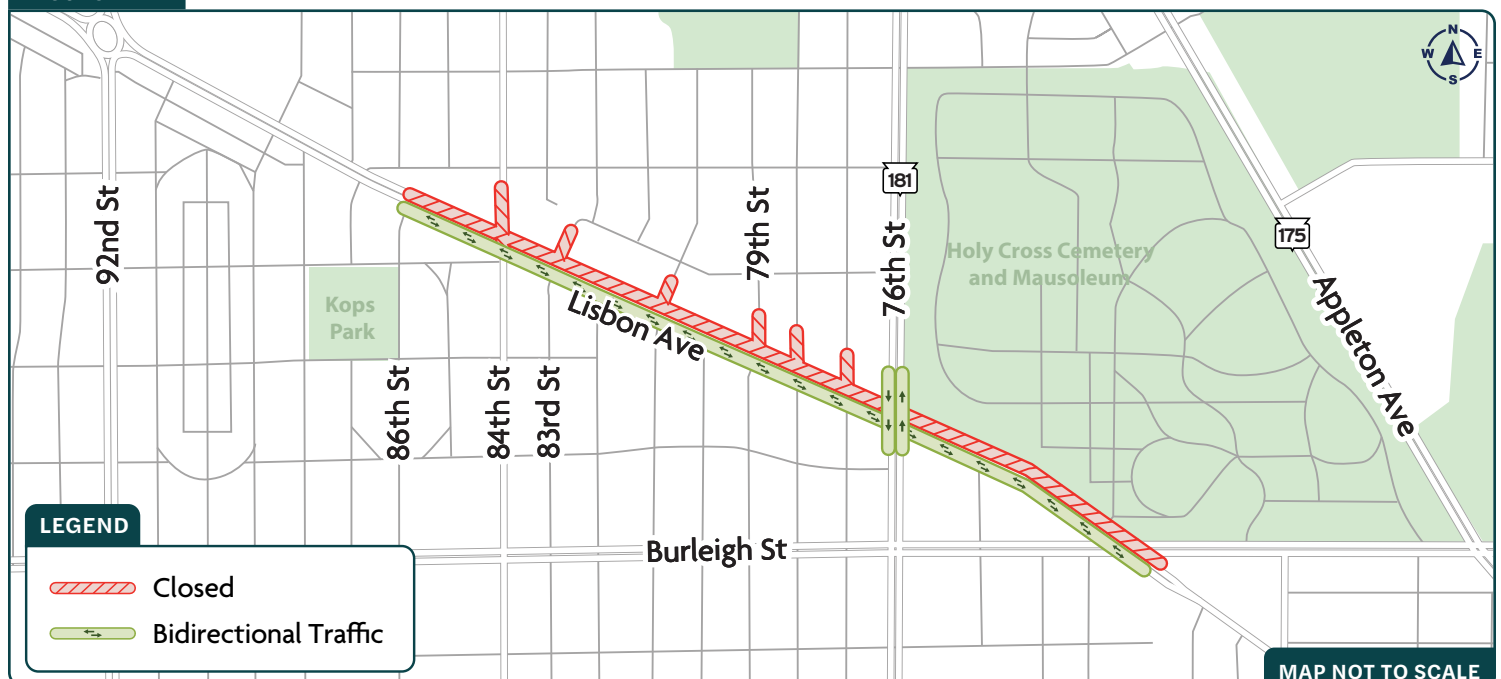

Topsoil and sod are scheduled to be installed along the newly reconstructed westbound lane.

Permeable Paver:

Permeable pavers help drain and filter storm water and snowmelt. By using porous materials, water travels into the soil and gravel adjacent to the concrete roadway, keeping water off city streets!

PROJECT MAP

Sod Maintenance:

Your new sod will require more care than the rest of your lawn. Following these instructions should result in a healthy lawn:

- 1 The contractor will water the new sod for at least 30 days to help it grow and develop a root system.
- 2 At the end of the contractor watering period, sod maintenance is the responsibility of the property owner.

NOTE: Sod is not covered by the same three-year guarantee as the concrete and asphalt work.

- 3 You may begin to mow your new sod once it is solidly rooted in the ground, healthy, and dry. Prior to mowing, tug firmly but gently on the grass to verify the sod has rooted.

NOTE: The contractor may have used metal staples on the slopes to keep the sod in place; make sure you remove these staples before mowing.

Do not mow to a height less than 2 inches for the first month.
