

City of Milwaukee Department of Public Works Public Involvement Meeting

January 18, 2024
Project 2652-05-00

North Water Street Bascule Bridge Over Milwaukee River, Milwaukee County

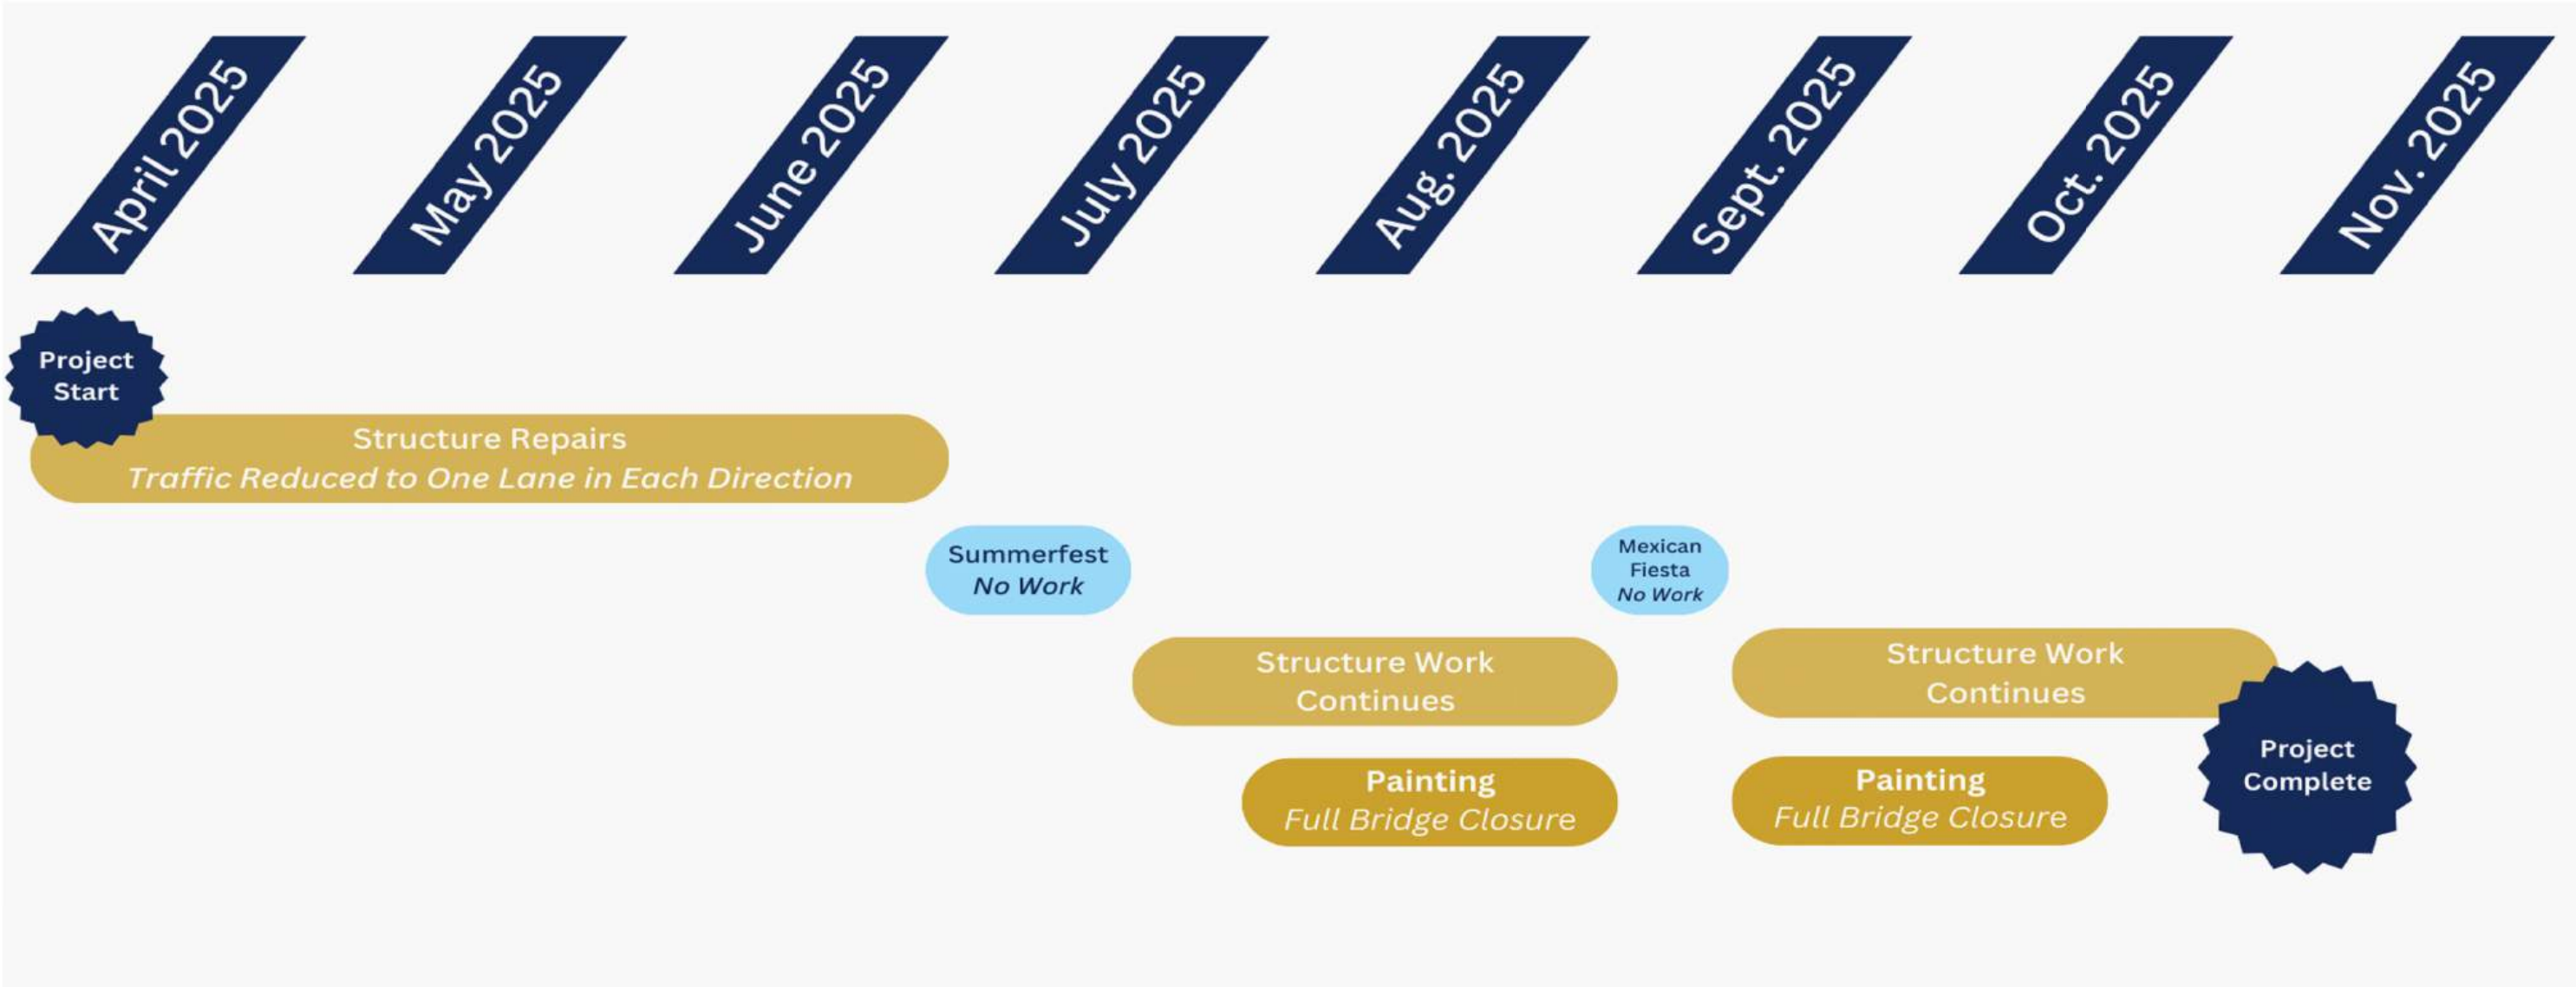

The existing structure was constructed in 1987. The primary areas of deterioration are the deck and superstructure.

Rehabilitation includes:

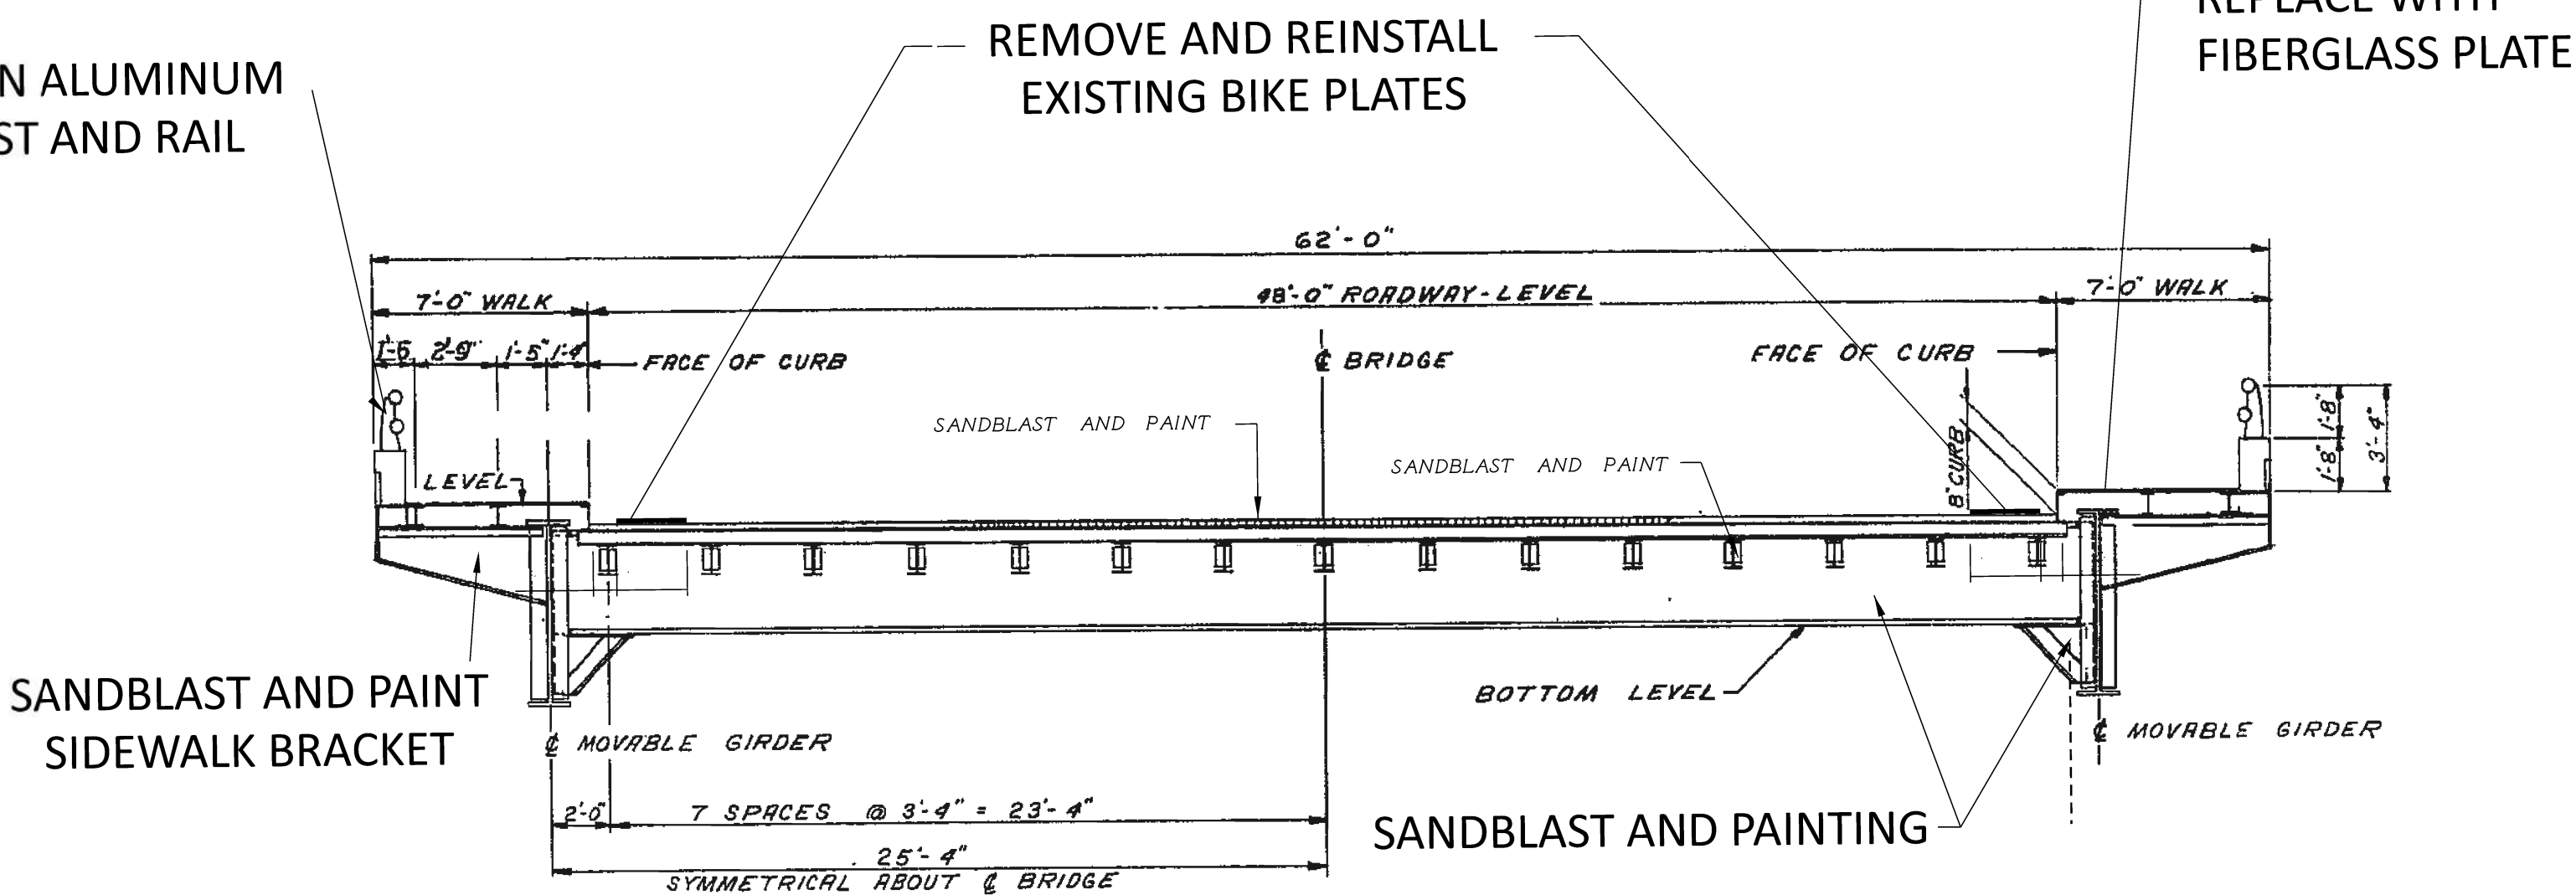

- Replace both abutment expansion joints
- Repair concrete surface
- Replace the aluminum sidewalk plates
- Upgrade the traffic gates
- Remove and repaint the superstructure steel

The Water Street corridor, however, has been identified in the Connecting MKE: Downtown Plan 2040 as a catalytic project and has been a primary area of focus for the Historic Third Ward Association, so future improvements for walking, biking, and transit are anticipated. Additionally, the Broadway Bridge, just to the east of Water Street, is slated for enhanced bikeway accommodations in late 2024 or early 2025 to provide better protection for people biking.

Anticipated Project Schedule

CLEAN ALUMINUM
POST AND RAIL

TYPICAL CROSS SECTION
